Art Unit: 2862

Applicant should provide a copy of the proposed corrections to Fig. 40 of the drawings for the examiner's approval.

Claims 18-20 are objected to because of the following informalities: In claim 18, at line 2, it is not clear what type of signal comes from the fault so as to have a frequency component. At line 4, recitation that the sensor is "not proximate" to the fault is vague in that the term "proximate" may have multiple interpretations depending on the setting involved. Appropriate correction is required.

Claims 18-20 are again rejected under 35 U.S.C. 102(b) as being anticipated by Helms (5,148,110).

Helms discloses (col. 3, lines 52-66) a method for monitoring faults in earthquake zones by sensing a frequency component of an electromagnetic signal. Since the latitude of the location of the sensor would naturally be known, the frequency component and latitude would inherently be associated.

Although the claims have been amended to recite that the sensor is not proximate to the fault, such language is not believed to distinguish over Helms. Since Helms' sensor is located above the surface of the earth and the source of the fault may originate at considerable depths below the surface, such sensor may be characterized as "not proximate" to said fault.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2862

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
